

## Microgrid

TYNDALL AFB, FL

First microgrid ever constructed on Tyndall AFB.

Following the devastation of Hurricane Michael in 2018, Tyndall AFB has promised to build back as "The Base of the Future" and no project holds more true to this credo than the current Tyndall AFB Microgrid project performed in partnership with FP&L and Tyndall AFB. This project will provide critical resiliency to one of Tyndall AFB's most mission critical facilities and help to better serve our servicemen and servicewomen.

*UNIQUE ATTRIBUTES:* This project represents the first microgrid to be constructed on Tyndall AFB property and consist of a solar array, battery storage, microgrid controller and switchgear along with quick-connect emergency power capability.
